

Kim E.

Technical Project Manager (Transitioning) | AI Systems |
Data Infrastructure | Workflow Automation | AI
Evaluation & Analytics

kim@fellow-earthlings.org
<https://www.linkedin.com/in/kim914481>
7134981264
Galveston, Texas, USA

Technical systems and analytics professional transitioning into project management roles focused on AI systems, data infrastructure, and workflow automation. Experience supporting document intelligence pipelines, AI model evaluation, and analytics automation while coordinating stakeholders and translating technical work into operational systems.

Work Experience

Outatuation Advanced AI-Powered Document Insights and Data Extraction Externship *Extern*

Nov 2025 -

Worked on the design and evaluation of an AI driven document processing pipeline that converts complex mortgage documents into structured, searchable data.

- Contribute to development of AI powered document intelligence pipelines used to extract structured information from large mortgage document sets
- Integrate OCR tools, PDF parsing frameworks, and retrieval augmented generation systems
- Evaluate system performance across OCR accuracy, retrieval quality, and model routing logic
- Document architecture decisions and system performance findings

Marketing Analytics Specialist *Independent Consultant*

Jun 2024 - Dec 2025

Designed automated analytics and reporting systems that translate complex multi source data into structured insights for operational and strategic decision making.

- Designed automated reporting workflows that consolidated multi channel marketing data into executive ready insight summaries
- Reduced manual reporting workload by approximately 50 percent through automation and standardized reporting systems
- Built structured analytics pipelines supporting ongoing performance monitoring and decision making
- Conducted segmentation and cohort analysis to identify behavioral patterns across campaign datasets
- Applied SQL and Python workflows to generate predictive insights supporting planning and optimization decisions
- Communicated findings to stakeholders to support data informed strategy and resource allocation

Fellow Earthlings Gulf Coast Nonprofit Director *FELLOW EARTHLINGS WILDLIFE CENTER INC*

Jul 2020 - Dec 2025

Branch founder role focused on designing transparent, human-centered data systems that transform unstructured field observations into decision-ready information for public and stakeholder use.

- Founded and operated a volunteer driven nonprofit focused on wildlife support and environmental monitoring
- Designed data systems used to track field observations and volunteer activity
- Implemented structured reporting processes to improve transparency and data reliability
- Coordinated contributors across multiple coastal regions

AI Model Evaluation and Quality Oversight Specialist

Independent Consultant

May 2020 - Dec 2025

Evaluated AI system behavior and contributed to quality assurance frameworks used to assess model reliability and performance.

- Led multimodal evaluation across text, audio, and video AI systems
- Defined evaluation criteria used to identify hallucinations, reasoning failures, and dataset integrity issues
- Adjudicated ambiguous edge cases and aligned reviewers on consistent evaluation standards
- Conducted root cause analysis on systemic prompt and labeling failures
- Provided structured feedback loops to improve model performance and evaluation guidelines
- Supported reviewer calibration to maintain consistency across evaluation workflows

Freelance Contractor & Entrepreneur in Magazine Publishing and Editing

Dec 2017 - Aug 2023

Independent publishing venture focused on designing and managing end-to-end content production and digital publishing workflows.

- Managed full-cycle production for American Paranormal Magazine, culminating in a successful sale.
- Collaborated on editorial content and web publishing workflows using WordPress and Google Workspace

AI Quality Rater (US)

TELUS Digital AI Data Solutions

Mar 2020 - Apr 2023

Part-time role focused on evaluating AI-generated outputs against defined quality, relevance, and safety criteria to support reliable, user-facing system behavior.

- Evaluated AI generated outputs using structured quality guidelines
- Identified model failure patterns and edge cases impacting system reliability
- Maintained evaluation consistency across complex content scenarios

Veterinary Technician

Texas Litter Control

Mar 2014 - Aug 2016

Clinical support role in a high-volume veterinary setting, including specialized responsibilities within the Director's kitten rescue program.

- Assisted veterinarians with routine and emergency procedures, including physical exams, wound care, and surgical preparation.
- Administered medications, vaccines, and IV fluids as directed.
- Collected and prepared blood, urine, and fecal samples for laboratory testing.
- Monitored animal vital signs and post-operative recovery.
- Maintained accurate patient records and ensured a clean, safe clinical environment.
- Supported the clinic's Director-led kitten rescue program, providing intensive care for feral and abandoned kittens, including bottle feeding, medication administration, socialization, and monitoring for failure-to-thrive indicators.

EVS Team Supervisor

AMERY REGIONAL MEDICAL CENTER CLEAR LAKE | United States

Oct 2005 - Dec 2012

Supervisory role responsible for overseeing environmental services operations in a hospital setting, ensuring compliance, safety, and continuity of service across clinical and patient-care environments.

- Supervised and coordinated environmental services technicians supporting patient rooms, clinical areas, and operational spaces in an active medical facility.
- Managed staffing schedules, task assignments, and onboarding to ensure consistent coverage and adherence to health, safety, and infection-control standards.
- Implemented workflow and process improvements that increased team efficiency while maintaining service quality and compliance requirements.
- Monitored performance, addressed operational issues, and served as an escalation point to ensure continuity of service in a high-stakes care environment.

Projects

AI Document Intelligence Pipeline

Designed an AI document processing system extracting structured data from large mortgage files. Built pipelines integrating OCR, PDF parsing, and retrieval augmented generation. Evaluated model performance and retrieval accuracy while documenting architecture and optimization opportunities.

Automated Marketing Analytics Reporting System

Developed automated analytics pipelines converting multi source marketing data into structured reporting. Built SQL and Python workflows generating performance insights, segmentation analysis, and dashboards, reducing manual reporting workload by approximately fifty percent.

Environmental Data Monitoring Platform

Designed data tracking systems supporting environmental monitoring and volunteer coordination across coastal regions. Built structured schemas to organize field observations and implemented reporting workflows to improve transparency and data reliability.

AI Model Evaluation Framework

Developed structured evaluation workflows assessing reliability and reasoning performance of AI systems. Defined criteria for hallucination detection, failure analysis, and dataset integrity while supporting reviewer calibration and consistent evaluation standards.

Volunteer Experience

Director

2020 - Present

Fellow Earthlings Gulf Coast

Volunteer Coordination • Operations Management • Data Systems • Stakeholder Communication

Core Skills

Agile Methodologies, Scrum, Model Evaluation, Failure Mode Analysis, AI Systems Design, Automation Design, Data Visualization, Analytics, Document Intelligence, AI Evaluation, Information Architecture, Large Language Models (LLMs), Retrieval-Augmented Generation (RAG), Workflow Design, Decision Support Systems, Data Structuring, Interpretability, User Experience Design (UED), Human-in-the-Loop Machine Learning, Trust & Safety Design

Education

Selinus University of Sciences and Literature

Aug 2021 - Dec 2026

Doctor of Philosophy - PhD Linguistics

Languages

English (*Native*)

Certificates

Google Project Management

Google

Mar 2026

Unilever Digital Marketing Analyst

Unilever

Mar 2026

Advanced Project Management and Leadership

Johns Hopkins University

Mar 2026

Agile Scrum Master

Simplilearn

Mar 2026

AI App Builder

Airtable

Jan 2026

Google Analytics

Google

Dec 2025

Validity and Soundness Simplified

vixra.org

Oct 2023

This paper explains deductive argument validity and soundness. Validity depends on logical structure guaranteeing the conclusion if premises are true. Soundness requires both validity and true premises, highlighting symbolic logic's role in clarifying formal reasoning.
